

Dam Removal & Abandonment Policy Revision

The citizens of Northwest Wisconsin request:

- **Evaluation and revision of DNR dam removal/abandonment and permitting policies to better align with state renewable energy goals (25% x 2025).**

The examination and revision of these policies would benefit our citizens by:

- Retaining and re-establishing truly renewable hydro-electric power options
- Allowing small local power companies to meet renewable energy goals by investing more in infrastructure and less in permitting costs
- Improving safety, utility, and value of existing dam resources
- Maintaining current values of waterfront property and local government tax base in times of economic difficulty

There is strong community support to foster additional development of renewable energy and reduce our overall dependence on foreign oil.
